

The Student AI Responsibility Equation

A practical framework for responsible student AI use

Permission + Transparency + Verification + Protection + Judgment = Responsible AI Use

1

Permission

Use AI only when course, assignment, or institutional expectations allow it, and only for the purposes that are permitted.

2

Transparency

Be honest about how AI was used. Disclose or acknowledge AI assistance when required.

3

Verification

Check facts, sources, citations, calculations, and AI outputs before relying on them.

4

Protection

Protect personal, academic, research, and institutional information. Do not upload sensitive data into AI tools without authorization.

5

Judgment

Use critical thinking. Make sure the final work reflects your learning, reasoning, and responsibility.

**Responsible AI use is not just about using a tool.
It is about using it with integrity, clarity,
and judgment.**
